LIQUID SPRAY PAINT BOOTH

Visit Us - www.precisionpowdergun.com

▶ Down Draft Type Spray Painting Booth

These types of painting booths are specially designed for heavy and voluminous components which are difficult to handle; like tractors, chassis of vehicles, trailers, earth moving machineries, wagons etc. The fresh air flow; in such painting booth is from top to bottom. The water tank is placed underground; it can be either alkali-proof RCC or fabricated out of MS plates. Depending on the size of the component, the painting booth can be single sided or the double sided. Which means; there shall be single or double extraction chamber, on either or both sides of the component. The fresh air, coming from top of the painting booth takes away the over spray paint particles through metallic grill.

▶ Liquid Spray Paint Booth

Precision offers a wide range of Liquid Painting Booth to suit requirements and budgets that may suit for Batch or Conveyorised Painting Plant. The main function of Liquid paint spray booth is to keep the environment free from vapors to exhaust the solvent vapors to atmosphere, to direct the spray towards the Job and to Kill the overspread paint and to convert it in easily disposable form. liquid spray paint booth has been advocated throughout industry as the most efficient method of filtering paint over spray. At the same time it effectively prevents in over spray from reaching the surrounding area. Spray painting booth are used to increase efficiency of operator, reduce dust problems, reduce over spray problems, paint dust, increase corrosion resistance of product to be painted. Normally liquid spray paint booths are made of mild steel components (Value addition can be one by all stainless steel components), it also consist of highly efficient exhaust blower or blowers to throw thinner in higher altitudes of air.
